Version 3.0

Lab 12 — Automate an HR Pipeline with a Project

Topic 04 · Staff Questions, Repeatable Work and Advanced Claude · approximately 20 minutes

Where the files for this lab are

Every file this lab needs is inside one folder that came with your course materials. Open the labs folder, then open this folder inside it:

```
labs/lab-12-automate-an-hr-pipeline-with-a-project/
```

Do not look in any other lab folder. This lab is self-contained.

Goal

A project keeps the policy library, the staff data and the house rules in one workspace. Set it up once, then run the new starter pipeline twice without attaching a file or restating a rule.

What you will produce

A Lumina Living HR project with materials and standing instructions, and a new starter pipeline run twice from it.

Before you start

- Lab 0 completed, so Claude Desktop is installed and signed in.
- Labs 5, 6 and 9 completed, so you have the materials to upload.
- Projects available in your Claude plan. If it is missing, follow the trainer and use a normal conversation with folder access.

Steps

Follow these in order. Where a shaded block appears, type or paste it exactly as shown into Claude, then read what Claude proposes before you accept anything.

1. Open Claude Desktop and select Projects in the sidebar, then New project. Name it Lumina Living HR. A project is a workspace that remembers its materials and its rules, so you stop re-uploading and re-explaining the same things every time.
2. Upload the materials the HR team works from. Take them from the earlier lab folders: the three policy PDFs from Lab 5's hr-policy-library, the staff workbook from Lab 6, and the quarter files from Lab 9. This is the HR team's shared context, in one place.
3. Set the project instructions. In the project, open its settings and paste the text below into the custom instructions. These are the standing rules for everything the project produces — the same rules you have been typing into every prompt so far.

Prompt to type into Claude:

```
You are working as part of the Lumina Living HR team.
```

Whenever you produce anything for this project:

- Use only the materials uploaded to this project. Never invent a date, an amount, a notice period or an entitlement.
- Name the file and section behind every fact.
- Where the materials are silent, write 'need to check' instead of guessing.
- Never state a legal conclusion. Flag it for review instead.
- Plain English, short sentences.
- Nothing is sent, published or approved without a named person signing it off.

4. Now run a real HR pipeline inside the project. Start a new conversation in it and ask for the new starter workflow. Notice what you did not have to do: no files attached, no rules restated.

Prompt to type into Claude:

Using only the materials in this project, run the new starter pipeline for Rachel Sim, who starts in Online on 3 March.

Produce, in order:

1. A checklist of everything HR must do before her first day, with the owner for each item
2. A short welcome note to her, in our house tone
3. A one-line entry for the daily HR report saying what is still outstanding

Name the file behind every rule you apply. Where the materials do not cover something, say 'need to check' rather than filling the gap.

5. Run it again for a second new starter, in one line. The project holds the materials and the rules, so the pipeline repeats itself. Check both outputs name their source files, then decide which parts of this you would let run without a person reading it first.

Prompt to type into Claude:

Now run the same pipeline for Terrence Wong, who starts in Office on 10 March. Do not ask me for the rules again.

Check your work

A project named Lumina Living HR exists with the policy PDFs, the staff workbook and the quarter files uploaded, and custom instructions set. The new starter pipeline produced a checklist with owners, a welcome note and a report line for two different starters, every fact naming its source file, with gaps marked 'need to check'.

If something goes wrong

- **Projects is not in the sidebar.** It depends on your Claude plan. Follow the trainer demonstration; the idea of standing context still applies.

- **Claude ignores the project instructions.** Open the project settings and check they saved. Instructions apply to new conversations in the project, not to ones started outside it.
- **It used a file that is not in the project.** Ask it to list the files it used. Anything outside the project is a finding.
- **The second run asked for the rules again.** Check you started the conversation inside the project, not in a new window.

Challenge

Write a second Skill for a task you repeat every week, and give it to a colleague to run.

Reflection

Which is more valuable for your own team: a saved method, or a shared workspace?
